

A proposed fix for a Visual BASIC 6.0 form display problem.

Sometimes when you use form menus, this may happen to you after you compile your application. The bottom of the form is cut off as shown below.

This is just one way of fixing the problem.

1. While in the IDE, open the form window that is presenting the problem and leave it open.
2. Recompile your application.
3. Save your work and close the form window.
4. Run your application.
5. Most of the time, this will resolve the problem.
